

Stool

TWIST 024

The idea for the Twist stool comes from the geometric polygons of mathematics, also called polygons. The pallet has twenty-four sides that create the illusion of a round stool seat. Thanks to the straight sides of the seat, the legs are "locked" to each other when stacking. The stool can be stacked endlessly and when many stools are stacked on top of each other, a closed and beautiful side is created, reminiscent of older classical columns.

Twist is available as clear lacquered or as stained.
